

Cylindrical screen - Installation with accessory frame

Last information update: March 2025

Accessory code

X304: Cylindrical screen - Installation with accessory frame

Technical description

Cylindrical screen for a Ø 137 mm spotlight. The cylindrical screen is made of steel with a zinc-nickel treatment and corrosion-proof passivation. It is painted black. The screen has openings so that water can flow out in applications in upward pointing applications. It has fixing screws that are hidden when the accessory is installed. The screen has internal cover plates that prevent the light from shining out sideways through the water outlet openings. To prevent illuminated cracks, there is a gasket for fastening it to the accessory holder (for X251-X252-X253-X247-X248-X249 only). The screen is supplied with protective glass for the accessory holder, which gives it a protection level of IP66 so that water does not collect inside. It is painted with a liquid coating.

Installation

The screen is installed on the accessory holder with hidden screws.
