Accessory code

X430: Programming Interface DALI

Technical description

The device allows you to interact with the LED luminaire allowing you to perform the following actions: dimming of light intensity and Midnight programming. Programming can be carried out by connecting the DALI output of the interface to the DALI terminal blocks of the lighting fixture, or directly from the access door of the pole if the DALI wiring has been previously brought to this position.

Installation

A PC is required to program the luminaire.

Colour

Indeterminate (00)

Wiring

The DALI output of the interface must be connected to the DALI terminal block of the luminaire.

Notes

The interface is supplied with a USB cable for connection to the computer

Complies with EN60598-1 and pertinent regulations

IP67
